

Inventory

Site Survey

Quick Facts

Features

Consistent survey format across Avaya and Nortel platforms

Cross-checked port counts including breakouts for equipped, working, spare, phantom and virtual

Complete inventory of software packages and installed hardware with card types and vintage information

Common and peripheral equipment/cabinet maps in bay-face format

IP hardware identification

Customized end-of-life analysis

General system information such as serial numbers and security IDs

Benefits

Keep maintenance costs low - the Site Survey clearly identifies unused capacity in your system and allows you to lower the ongoing cost of your service

Survey systems can be performed in as little as two hours without dispatching a technician

Uncover support liability with our Manufacturers Support Analysis

Manage your spare resources better between systems - the report easily identifies both used and spare resources, preventing unnecessary purchases

Consistent look and format for both Avaya and Nortel system information allows you to analyze all your systems together
